

**S-1600 Power Unit
with DC-1200AC Dirt Canister**

The Silent Partner® S-1600 is a split canister system. This two part system includes the motor, which is housed in a special foam-lined chamber that reduces motor noise coming from the unit power unit and a separate dirt canister, used for dirt collection and filtration. The split system allows you to hang the dirt canister in an easy-to-service area of your home, while locating the motor unit away from the living environment, such as a garage or basement. The S-1600 uses cyclonic filtration. Once dirt and debris is swept up, it goes into the dirt canister where it swirls around, separating the large debris from the small, allowing the large debris to fall to the bottom of the dirt can while the lighter dirt and dust is vented straight outside of your home. Vacu-Maid's cyclonic units also feature a patented Air Channel, which allows a plastic can liner to be used inside the dirt canister, making emptying the can less hassle and less mess. With the Air Channel, you eliminate clouds of dust billowing up in your face when you empty the dirt can. The S-1600 is constructed from rolled galvanized steel and powder coated for a tough, corrosion-resistant lifetime of use. As with all of our Vacu-Maid central vacuum systems, using the S-1600 can help decrease asthma and allergy symptoms by removing dust and allergens from your living areas. Vacuuming with these central vacuums provides a powerful, efficient cleaning job that will rid your home of these allergy-triggering irritants.

Silent Partner®

S-1600 Split Canister System	
MOTOR	5.7" Tangential By-Pass
VOLTAGE	120 A.C.
MAX AMPS	13.6
MAX AIR WATTS	440
AIRFLOW (CFM)	112
SEALED VACUUM (inches H₂O)	111
FILTRATION	Cyclonic
SOUND LEVEL	61 db
UP TO TOTAL SQ. FEET	5,000
DIRT CAPACITY	27 Qt.

Features & Benefits:

- Sound Reduced Power Unit--Foam lined motor compartment reduces motor noise.
- Muffler Kit--Muffler included for additional sound reduction.
- Cyclonic Filtration--Filter free cyclonic separation; no messy bags or filters.
- Patented Air Channel--Allows a plastic can liner to be used inside the dirt canister making emptying the can less hassle and less mess.
- Improves indoor air quality--Your family deserves a healthy home.
